Outpatient Services

Wound Care and Hyperbaric Medicine

Each year, millions of Americans suffer from chronic, non-healing wounds caused by diabetes, vascular disorders or traumatic events. But thanks to the emergence of specialized treatment programs, people with wounds are healing more quickly than ever before.

Accredited by the Undersea & Hyperbaric Medical Society, the Center for Wound Care and Hyperbaric Medicine at Carroll Hospital features a multi-disciplinary team of specialists with knowledge and training in all facets of wound supervision. Together, they offer patients exceptional treatment and support.

Types of chronic, nonhealing wounds our staff expertly treat include:

- Burns
- Ischemic ulcers
- Neuropathic ulcers
- Peristomal skin irritations
- Pressure ulcers
- Surgical wounds
- Traumatic wounds
- Vasculitis
- Venous insufficiency

Customized Treatment Plans

Patients referred to our wound care program undergo a complete diagnostic examination to identify the type and cause of their wound.

Contact us today!

The Center for Wound Care and Hyperbaric Medicine is open Monday through Friday, 7:30 a.m. – 4 p.m. For more information, please call 410-871-6348. For appointments, call 410-871-7678 (choose option 4).

www.CarrollHospitalCenter.org
Our team of specialists — including general and vascular surgeons, nurses, case managers and educators — works closely with the patient’s referring physician to develop a specialized treatment plan. These plans incorporate the most advanced wound care available, including:

- Bio-engineered tissue grafting
- Compression therapy
- Debridement
- Edema management
- Hyperbaric oxygen therapy
- Noninvasive vascular assessment
- Prescriptive growth factors

Patients also benefit from other wound healing approaches, such as:

- Diabetes education
- Nutrition assessment and counseling
- Pain management
- Pain and caregiver counseling
- Physical and/or occupational therapy

Hyperbaric Oxygen Therapy

As a wound care patient, you may be an ideal candidate for hyperbaric oxygen therapy (HBOT), a medical treatment that uses pure oxygen to accelerate and enhance the body’s natural ability to heal. During HBOT, the patient is placed in a pressurized chamber where he or she breathes 100 percent oxygen for 90 minutes. As a result, high concentrations of oxygen are quickly delivered to the bloodstream which speeds wound healing, helps fight infections, stimulates the growth of new blood vessels and improves circulation.
